Towards a clinically meaningful definition of drug-resistance <i>A. Arzimanoglou, P. Ryvlin</i>	1
The risk, correlates and temporal patterns of intractable epilepsy <i>A.T. Berg</i>	7
Are drug-resistant and drug-sensitive patients the same? Observations from the Glasgow database <i>M.J. Brodie</i>	17
Refractory versus non-refractory status epilepticus: frequency, differentiating clinical features, and outcome <i>A. Neligan, S. Shorvon</i>	29
Current knowledge on basic mechanisms of drug-resistance <i>W. Löscher</i>	47
What should the characteristics be of a pertinent model to identify new treatments for drug resistant epilepsy? <i>E.H. Bertram</i>	63
Pertinent approaches for a genetic identification of resistance to antiepileptic drugs <i>S. Sisodiya</i>	75
Molecular targets of antiepileptic drugs <i>G. Sills</i>	85
Antiepileptic drugs in development with a real potential <i>E. Perucca</i>	107
How many patients with drug-resistant epilepsy become seizure-free <i>because</i> of surgery? <i>D. Schmidt</i>	141

Neurostimulation for epilepsy: myth or reality? <i>P. Kahane, S. Saillet, L. Minotti, L. Vercueil, S. Chabardès, A. Depaulis</i>	153
Beyond seizure reduction <i>F.G. Gilliam, P. Perucca</i>	171
Early identification of drug-resistant patients <i>D.R. Nordli</i>	187
Epileptic encephalopathies <i>versus</i> “garden variety” focal epilepsies: can they be considered together? <i>J.H. Cross, C. Eltze</i>	199
