

Contents

▪ Part 1 – Thyroid

- 1/ Surgical anatomy of the thyroid and parathyroid glands.
- 2/ Molecular regulation pathways of thyroid cancers
- 3/ History of thyroid surgery
- 4/ Medico-economic impact and the care pathway in endocrine surgery
- 5/ The thyroid nodule: diagnosis and indications
- 6/ Surgical Indications and management of goitres
- 7/ Surgical Indications and management of hyperthyroidism
- 8/ Differentiated thyroid cancers
- 9/ Pathological anatomy and cytology of differentiated thyroid cancers
- 10/ Medullary thyroid cancer
- 11/ Poorly differentiated and anaplastic thyroid cancers
- 12/ Thyroidectomy by cervicotomy
- 13/ Management of descending and thoracic goitres
- 14/ Revision thyroid surgery
- 15/ Management of complications of thyroidectomy
- 16/ Neurostimulation of the recurrent laryngeal nerve
- 17/ Video-assisted thyroidectomy
- 18/ Robotic thyroidectomy
- 19/ Lymph node curettage for differentiated follicular thyroid cancer
- 20/ Technique for and complications of lymph node curettage of the central neck compartment
- 21/ Technique for and complications of lateral curettage
- 22/ Dysphonia and post-thyroidectomy management.

▪ Part 2 – The parathyroid glands

- 23/ Physiology of phosphocalcium regulation
- 24/ Primary non-familial hyperparathyroidism: clinical and laboratory diagnosis
- 25/ Preoperative imaging
- 26/ Sporadic primary hyperparathyroidism: imaging and preoperative laboratory tests
- 27/ Medical management of patients with primary hyperparathyroidism
- 28/ Sporadic primary hyperparathyroidism: surgical techniques
- 29/ Primary hyperparathyroidism: indications and results
- 30/ Hyperparathyroidism associated with chronic renal disease
- 31/ Surgical techniques and results in the treatment of renal hyperparathyroidism
- 32/ Management of persistent or recurrent hyperparathyroidism
- 33/ Sporadic primary hyperparathyroidism in children and adolescents
- 34/ Hyperparathyroidism and pregnancy
- 35/ Parathyroid cancer
- 36/ Pre- or preoperative discovery of a parathyroid incidentaloma
- 37/ Diagnostic pitfalls and artefactual hyperparathyroidism: lithium, thiazides, vitamin D deficiency, hypercalcaemia-hypocalciuria

▪ Part 3 – Inherited predisposition syndromes

- 38/ Types 1 and 2 multiple endocrine neoplasias: pitfalls for the clinician in general and surgeon in particular
- 39/ Type 1 multiple endocrine neoplasias (MEN 1)
- 40/ Type 2 multiple endocrine neoplasias (MEN 2) and familial medullary thyroid carcinoma (MTC)
- 41/ Familial non-medullary thyroid cancers
- 42/ Isolated familial primary hyperparathyroidism - hyperparathyroidism– *jaw tumour syndrome*
- 43/ Inherited forms of pheochromocytomas and paragangliomas
- 44/ Cervical paragangliomas
